SUMMARY

B.Tech Computer Science & Engineering student (2024–2028) seeking Software Engineering, Full-Stack, Backend, Web Development, and AI/ML internships. Built web and Android applications using React, Next.js, TypeScript, and REST APIs, and a PyTorch computer vision project on AI-generated image detection. Strong foundation in Data Structures & Algorithms, OOP, and DBMS.

EDUCATION

B.Tech, Computer Science & Engineering | Jaypee University of Engineering and Technology, Guna | 2024–2028
Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Software Engineering, Computer Organization & Architecture, Machine Learning

TECHNICAL SKILLS

Languages: C, C++, Java, Python, JavaScript, TypeScript, SQL
Frontend: React, Next.js, HTML, CSS, Tailwind CSS, Vite
Backend & Databases: Node.js, Express.js, REST APIs, MongoDB, Mongoose, PostgreSQL, Prisma, SQLite, MySQL, Supabase
AI/ML: PyTorch, scikit-learn, OpenCV, NumPy, Pandas, Matplotlib, Seaborn, CNNs, Computer Vision, Explainable AI (Grad-CAM)
Tools: Git, GitHub, VS Code, Android Studio, Jupyter Notebook, Google Colab, Kaggle

PROJECTS

Detection of AI-Generated Images (Ongoing) | Python, PyTorch, ResNet-18, FFT, OpenCV
- Developing a dual-branch CNN in PyTorch that fuses ResNet-18 spatial features with FFT frequency-domain features to detect AI-generated images.
- Evaluating cross-generator generalization with Leave-One-Generator-Out (LOGO) testing across 7 generators (28,000 images, Tiny-GenImage).
- Measuring performance with Accuracy, Precision, Recall, F1, ROC-AUC, PR-AUC, and Confusion Matrix; testing robustness under JPEG compression, resizing, blur, and noise.
- Applying Grad-CAM and frequency heatmaps (Explainable AI) to interpret which spatial and frequency cues drive predictions.

Job Tracker (Ongoing) | Next.js, React, TypeScript, Tailwind CSS, PostgreSQL, Prisma ORM
- Building a full-stack job application tracking platform with Next.js (App Router), React, and TypeScript, styled with Tailwind CSS.
- Modeled data with Prisma ORM on PostgreSQL and implemented CRUD operations for managing and tracking job applications.
- Developed a dashboard with analytics views summarizing application data and status.
- Added resume management and user settings pages to support the end-to-end job search workflow.

AI Trip Planner (March 2026) | React, JavaScript, CSS, AI API, Vercel | GitHub | Live Demo
- Developed a responsive React web app that generates personalized travel itineraries by integrating an AI API for real-time recommendations.
- Implemented API request handling and state management for dynamic, interactive user experiences; deployed on Vercel.

Mood Journal – Android App (May 2026) | Java, SQLite, MPAndroidChart, Android Studio | GitHub | APK
- Developed an Android mood-tracking and journaling app in Java with SQLite for local data persistence.
- Implemented mood analytics with interactive pie charts (MPAndroidChart), a color-coded calendar view, mood-based music recommendations, and light/dark themes.

ACHIEVEMENTS & ACTIVITIES

- Team Lead, Hacktron Hackathon (JUET 2025); Participant, Smart India Hackathon (SIH) 2025
- Solved 100+ Data Structures & Algorithms problems on LeetCode
- Certified in C Programming and C++ Programming
- Volunteer and Coordinator, CSI Dev Club, JYC
